LinkedIn | Portfolio

Technical Skills

Frontend

Angular (v9–19)
Next.js / React
TypeScript / JavaScript (ES6+)
SCSS / HTML5
Accessibility (WCAG standards)
Responsive & component-driven architecture

Backend

Node.js
Nest.js
RESTful APIs

Cloud & DevOps

AWS (Lambda, S3, IAM, etc.)
Terraform
Azure
CI/CD pipelines

Testing

Jest
Jasmine
Pact
Unit & integration testing

Design & UX

Design systems principles
Adobe XD / Illustrator
Figma
Accessibility-first development

Exposure to

Angular 20 & 21
Server-side rendering (Next.js)
Express
MongoDB
Mongoose

Professional Summary

Software engineer with over 6 years of experience delivering enterprise-scale Angular applications within complex, high-traffic environments. Currently embedded on the British Airways account, contributing to large-scale re-platforming, accessibility transformation, and modernisation initiatives.

Strong frontend expertise (Angular v9–19, Next.js, React) combined with growing backend and cloud experience using Node.js, Nest.js, AWS, and Terraform. Actively progressing toward increased backend ownership and full-stack architectural responsibility.

Professional Experience

Leighton – British Airways Account

Software Engineer (Embedded Consultant)

March 2022 – Present

Embedded within enterprise teams delivering customer-facing applications across the British Airways digital ecosystem.

Key Contributions:

- Contributed to the redesign and re-platforming of large-scale Angular applications, improving maintainability, performance, and accessibility compliance.
- Delivered new functionality for the Disruptions team using Angular 19, supporting customer self-service during irregular flight operations.
- Played a key role in the Seat Map re-platform project, migrating to Angular 16 with a Nest.js backend, implementing structured testing strategies using Jest, Jasmine, and Pact.
- Contributed to a Ready to Travel (RTT) proof of concept, building the Angular 14 frontend while supporting backend tasks using AWS, JavaScript, and Terraform.
- Led accessibility remediation initiatives across legacy XSLT/XML applications, aligning features with WCAG standards and improving usability for assistive technology users.
- Collaborated closely with cross-functional teams including designers, backend engineers, QA, and product stakeholders.
- Participated in code reviews and architectural discussions to improve long-term system quality and consistency.

Environment: Angular 14–19, TypeScript, Nest.js, Node.js, AWS, Terraform, Jest, Jasmine, Pact, XSLT/XML

Victoria Hurley

Software engineer

Education & Certifications

AWS Partner Accreditation (Technical)
Amazon Web Services
February 2024

Design Systems Course
Nielsen Norman Group
March 2022

BSc (First Class Honours), Music Technology
London Metropolitan University
July 2012

REG Technologies

Software engineer
September 2019 – March 2022

Responsible for the development, maintenance, and evolution of a subscription-based Angular platform serving regulated businesses within the insurance sector.

Key Contributions:

- Built and maintained features across Angular 9–12 applications, including document exchange functionality, dashboards, and international regulator modules.
- Contributed to front-end architecture decisions and improved component reusability across the platform.
- Collaborated with stakeholders to translate regulatory requirements into scalable technical solutions.
- Contributed to UI/UX design work using Adobe XD and Illustrator to support consistent product experience.
- Supported cloud-based infrastructure hosted in Azure.

Environment: Angular 9–12, TypeScript, SCSS, HTML5, Azure

Professional Focus & Development Goals

- Transitioning toward Full-Stack roles by leveraging Node.js and Next.js to build end-to-end, server-rendered applications.
- Advancing AI integration capabilities, focusing on the practical application of LLMs and prompt engineering within modern web workflows.
- Increasing involvement in system design and technical decision-making
- Continuing to specialise in accessibility-first and scalable frontend architecture

---

Personal project focus

- **Full-stack Garden Management System:** Built with Next.js, featuring an AI-powered content engine that leverages LLMs to automatically generate gardening blog posts.
- **Angular & Node.js Sandbox:** A dedicated environment for testing Angular 18-21 features and lightweight Express backends to stay current with framework updates.
