Technical Skills

Frontend

Angular (9–20)
TypeScript / JavaScript (ES6+)
SCSS / HTML5
Accessibility (WCAG standards)

Backend

Node.js
NestJS
RESTful APIs

Cloud & DevOps

AWS (Lambda, S3, IAM, etc.)
Terraform
Azure
Git & CI/CD pipelines

AI & Code Quality

Amazon Q
Snyk
CodeScene

Testing

Jest
Jasmine
Pact

Design & UX

Design systems principles
Adobe XD / Illustrator
Figma

Personal projects

Angular 21
Next.js / React
Express
MongoDB
Mongoose
Claude Code

Professional Summary

Software engineer with over 7 years of experience delivering enterprise-scale Angular applications within complex, high-traffic environments. Currently embedded on the British Airways account, contributing to large-scale re-platforming, accessibility transformation and modernisation initiatives.

Strong Angular expertise (9–20) combined with growing backend and cloud experience using Node.js, NestJS, AWS and Terraform, extended through personal projects in Next.js, React and AI-assisted development. Actively progressing toward increased full-stack ownership and architectural responsibility.

Professional Experience

Leighton – British Airways Account

Software Engineer (Embedded Consultant)

March 2022 – Present

Embedded within enterprise teams delivering customer-facing applications across the British Airways digital ecosystem.

Key Contributions:

- Delivered Disruptions features in Angular 15–20, including adapting the flow for the BA mobile app and integrating the help team’s chatbot.
- Integrated Amazon Q for rapid feature generation and refactoring, while utilising Snyk and CodeScene to identify security vulnerabilities and technical debt.
- Contributed to the redesign and re-platforming of large-scale Angular applications, improving maintainability, performance, and accessibility.
- First developer on the new Seat Map team: helped interview our QA engineer, owned legacy releases, and onboarded new engineers.
- Played a key role in the Seat Map re-platform project, migrating to Angular 16 with a NestJS backend, implementing structured testing strategies using Pact.
- Sole engineer on accessibility remediation for the legacy Seat Map pages, working from audit reports to achieve WCAG compliance.
- Led the legacy seat itinerary redesign, planning work across a three-engineer team to deliver large changes with limited test environments.
- Contributed to a Ready to Travel (RTT) proof of concept, building the Angular 14 frontend while supporting backend tasks using AWS, JavaScript, and Terraform.

Environment: Angular 14–20, TypeScript, JavaScript, NestJS, Node.js, AWS, Terraform, Jest, Jasmine, Pact, Amazon Q, Snyk, CodeScene

Education & Certifications

Claude Badges (x4)

Anthropic

September 2026

AWS Partner Accreditation (Technical)

Amazon Web Services

February 2024

Design Systems Course

Nielsen Norman Group

October 2021

BSc (First Class Honours),

Music Technology

London Metropolitan University

July 2012

REG Technologies

Software Engineer

September 2019 – February 2022

Joined as a junior engineer and progressed to mid-level, working on a subscription-based Angular platform serving regulated businesses within the insurance sector.

Key Contributions:

- Built and maintained features across Angular 9–12 applications, including document exchange and in-app activity dashboards.
- Took over the International Regulators project from the Principal Engineer, building it out from his architecture through to delivery.
- Served as the team's sole designer, producing UI designs in Adobe XD and Illustrator alongside my engineering work.
- Contributed to frontend architecture decisions and improved component reusability across the platform.

Environment: Angular 9–12, TypeScript, SCSS, HTML5, Azure, Bootstrap

Professional Focus & Development Goals

- **Transitioning toward full-stack roles:** Leveraging Node.js and Next.js to build end-to-end, server-rendered applications.
- **Anthropic Proficiency:** Building on four Claude Academy credentials through hands-on AI development.
- **Increasing system design involvement:** Taking on greater architectural responsibility and technical decision-making.
- **Advancing scalable frontend architecture:** Championing accessibility-first development and modern best practices.

Personal project focus

- **Full-stack Garden Management System:** Built with Next.js, leveraging Claude Code and the BMAD method to streamline development. It features a multi-agent content pipeline with dedicated agents for generation, fact-checking, SEO review and tagging.
- **Angular & Node.js Sandbox:** A portfolio site and testbed for modern Angular features and lightweight Express backends, featuring case studies backed by published Medium series on accessible components and performance optimisation.
